I want to add google map to my chatbot. This bot will response to user's query to recommend some pharmacies to them. The way that I want to learn this Google Map API is the official document of it. What is more, there are a lot of video tutorials about it This is a good one about how to call Google Map API by Python.
https://www.youtube.com/watch?v=UrrWxyq1Z48
GitHub is also a precious library to find sample code. For example, this is a good project to show how to use Google Map API.
https://github.com/googlemaps/google-maps-services-python
This is a sample code to show how to embed query into URL.

```
https://maps.googleapis.com/maps/api/geocode/json?address=1600+Amphitheatre
+Parkway,+Mountain+View,+CA&key=YOUR_API_KEY
```

I hope to be able to feedback on the hottest public health-related news from the user's demand for the bot. As you can see, the recent global outbreak has raised public concern about health, and both health advice and advances in treatment have caught users' attention.
For now, I've decided to use the Google news API as my consulting source, which provides a free API to grab news from around the world. An interface suitable for python is also provided.
https://newsapi.org/docs/client-libraries/python
GitHub also has several open-source projects, but lacks the necessary tutorials to understand them. https://github.com/evanlindsey/Top-News-Search-CLI
https://github.com/RachealN/NewCLI/blob/master/new/newsapi.py
I'm currently trying to build on existing projects by embedding the API directly. I will try to find tutorials in this week.
